<div style="font-size:20px;font-family:Montserrat;padding-left:70px;padding-
right:30px;text-align:justify;">Agriculture was the essential development in
the rise of human
  civilization, whereby farming of acclimatize species produced food
oversupply that enabled people to reside in cities.
  Plants were independently sophisticated in at least 11 regions of the world.
Industrial agriculture based on large-scale monocropping in the twentieth
century came to influence agricultural output, though
  about 2 billion people still depended on maintaining agriculture.The plant
diseases effect the production. Identification of diseases and taking
necessary precautions is all done through naked eye, which requires labour and
laboratries. This application helps farmers in detecting the diseases by
observing the spots on the leaves, which inturn saves effort and labor
costs.</div><br><br>

Prediction: Oopps!! Your peach plant is infected by Bacterial Spots. This is a difficult disease to control when environmental conditions favor pathogen spread. Compounds for the treatment include copper, oxytetracycline (Mycoshield and generic equivalents), and syllit+captan; however, repeated applications are typically necessary for even minimal disease control.
